

Aerial Photography

Aerial Photography from the ground...

So, you would like some photography for your site but normal photo's are not going to be enough or you need a different angle? We also provide aerial photography facilities to get those shots your looking for, giving you a stunning pictorial edge to your site that your competitors just won't have! Here are some of the possible applications:

- Estate agencies - residential and commercial
- Roofing companies - showcase your work
- Pubs & hotels
- Restaurants
- Heritage and tourism We can provide a cost effective low-level aerial photographic service using a remote control digital SLR or digital video camera attached to a 20-metre telescopic mast mounted on a 4x4 vehicle.

This unique birds-eye view is previewed via an LCD screen at ground level. The control unit allows the operator to pan, tilt, zoom and frame the subject all from the ground. The telescoping mast can capture unique aerial views needing only the parking area of a medium sized family saloon.

We can provide this service separately from web design also. Contact Us if you would like to make use of our aerial photographic services.
